CPS 210 - Lab Quiz 5

Name: _____

1. (5 pts) Write a method that finds the area of a square. Just write the method for your submission. Calculation is:

   area = side * side

2. (3 pts) A method has the following method header:

   public static int summation(int end)

   Write **<u>ONLY</u>** the line of code to **call** the method above in a method header using whatever value you want for *end*. You must assign your call to the return type if it is anything but void.

3. (2 pts - True or False) The methods below with the following headers can be in the same program:

public static double getAverage(double x, double y)

public static double getAverage(int x, int y)

A. True

B. False
